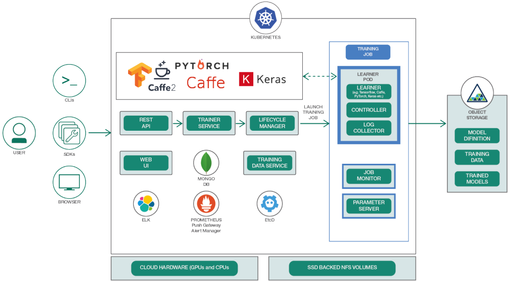
Training Infrastructure



FfDL Architecture - Source: https://developer.ibm.com/code/

- TensorFlow Estimator API
- CIML wrapper
- ML framework interchangable
- Training Options:
  - Run on a local machine
  - Helm deploy CIML, run in containers
  - Submit training jobs to Ffdl

Prediction

- Event driven: near real time
- No request to serve the prediction to
- MQTT Trigger from the CI system
- CIML produces the prediction
- Trusted Source: Continuous Training

- CIML kubernetes app components:
  - MQTT Client receives events
  - Data module fetches and prepares data
  - TensorFlow wrapper issues the prediction
  - Example: comment back on Gerrit/Github
