Some notes on me

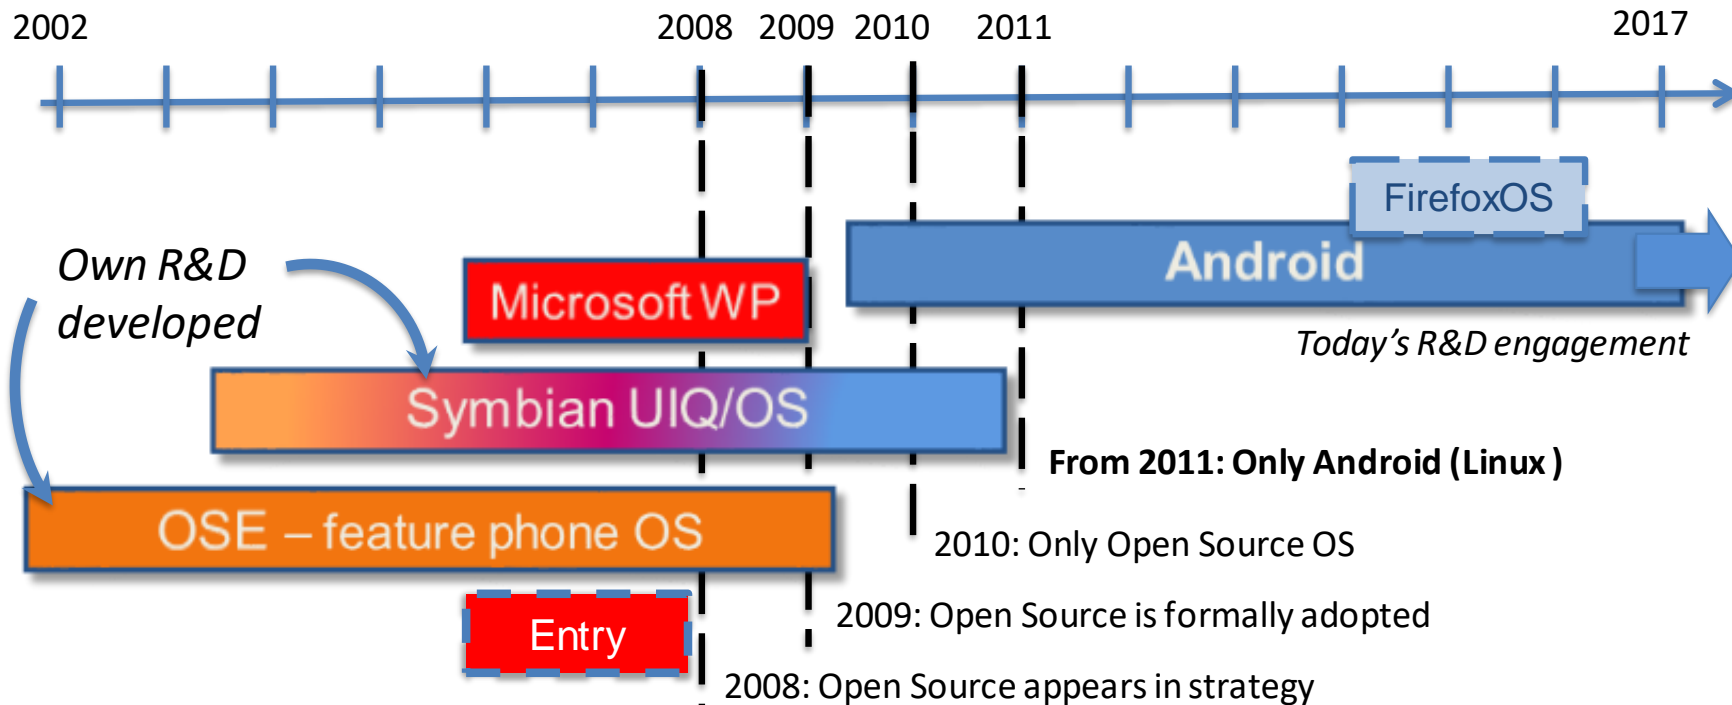

Carl-Eric Mols
Head of Open Source
Sony Mobile

- MSEE studies at Lund Institute of Technology (LTH), Sweden.
- Most of the career life spent on Telecom's SW Engineering, the first 12 years promoting a **formal methods based modeling tool**.
- Joined **Sony Ericsson** (now **Sony Mobile**) in 2004.
- Was in 2007 appointed to Software Strategist.
- Became in 2008 the "**Open Source Czar**"*, with the assignment to company-wide pave the way for Open Source in Sony Mobile.
- As the leading **Open Source Officer*** of Sony Mobile, I have spent the last ten years promoting, inside and outside the company, Open Source culture – which is anything but formal!
- Yet – as engaged in the ITEA 2 research project **SCALARE*** – I have tried to "formalize" some of the Open Source phenomena

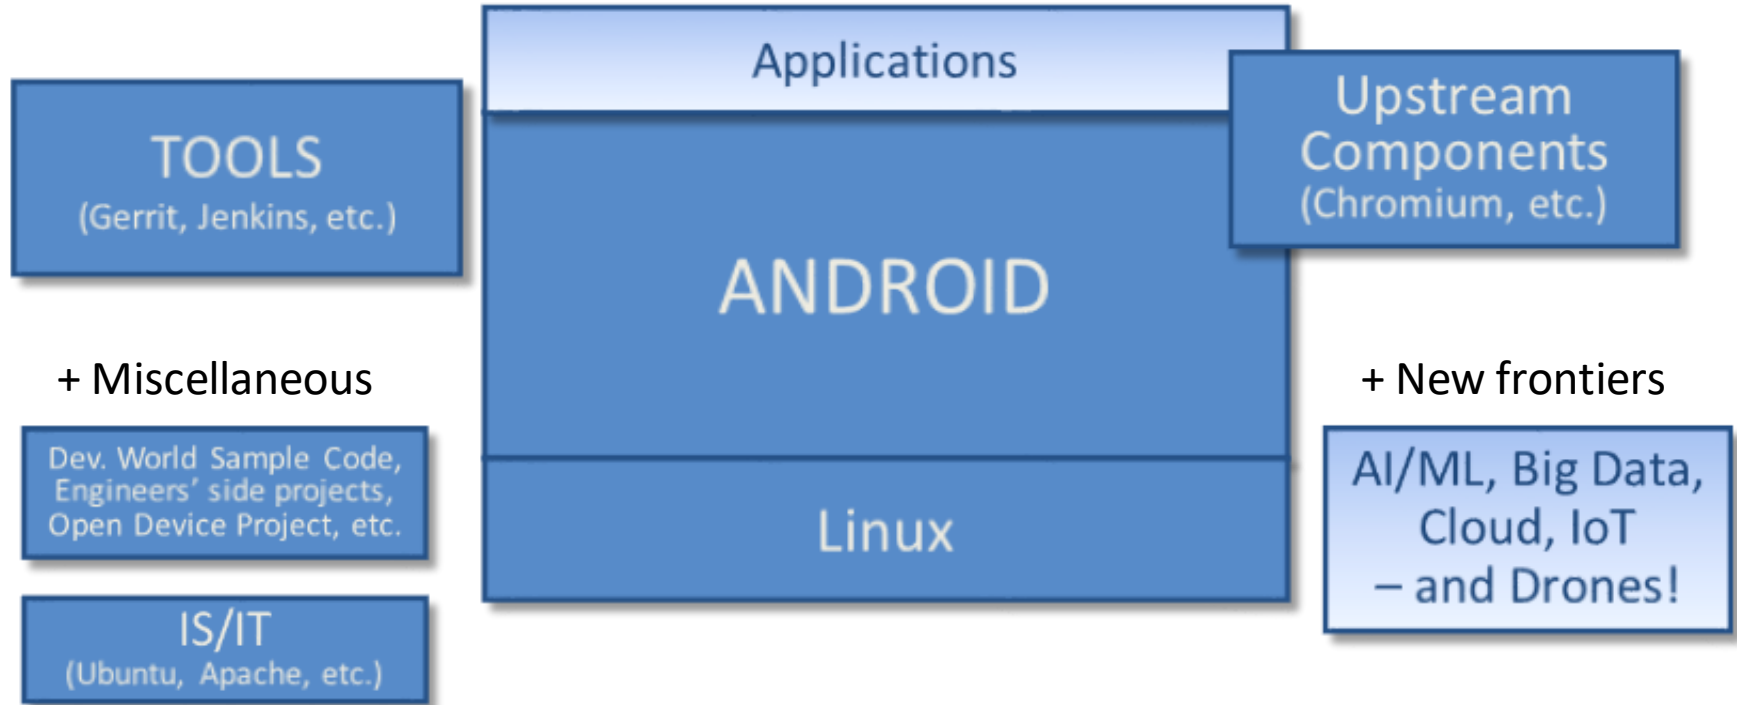

*) more to come!

A layered view on Open Source Software

Open Source is not only about

- *Code & License*
- *Development Model & Culture*
- *Market disruptor & Biz builder*

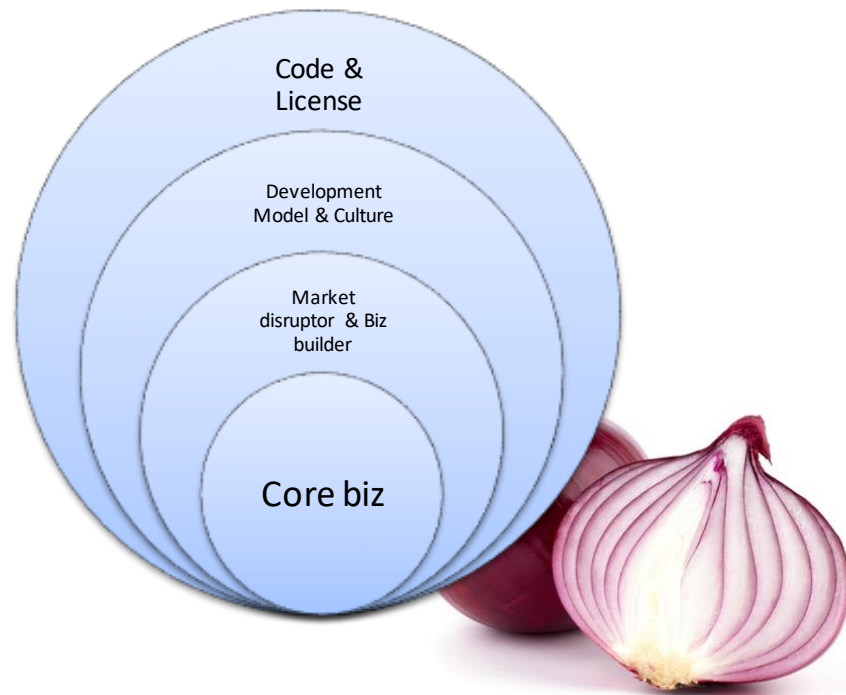

Open Source Software =

+ Development Model & Culture

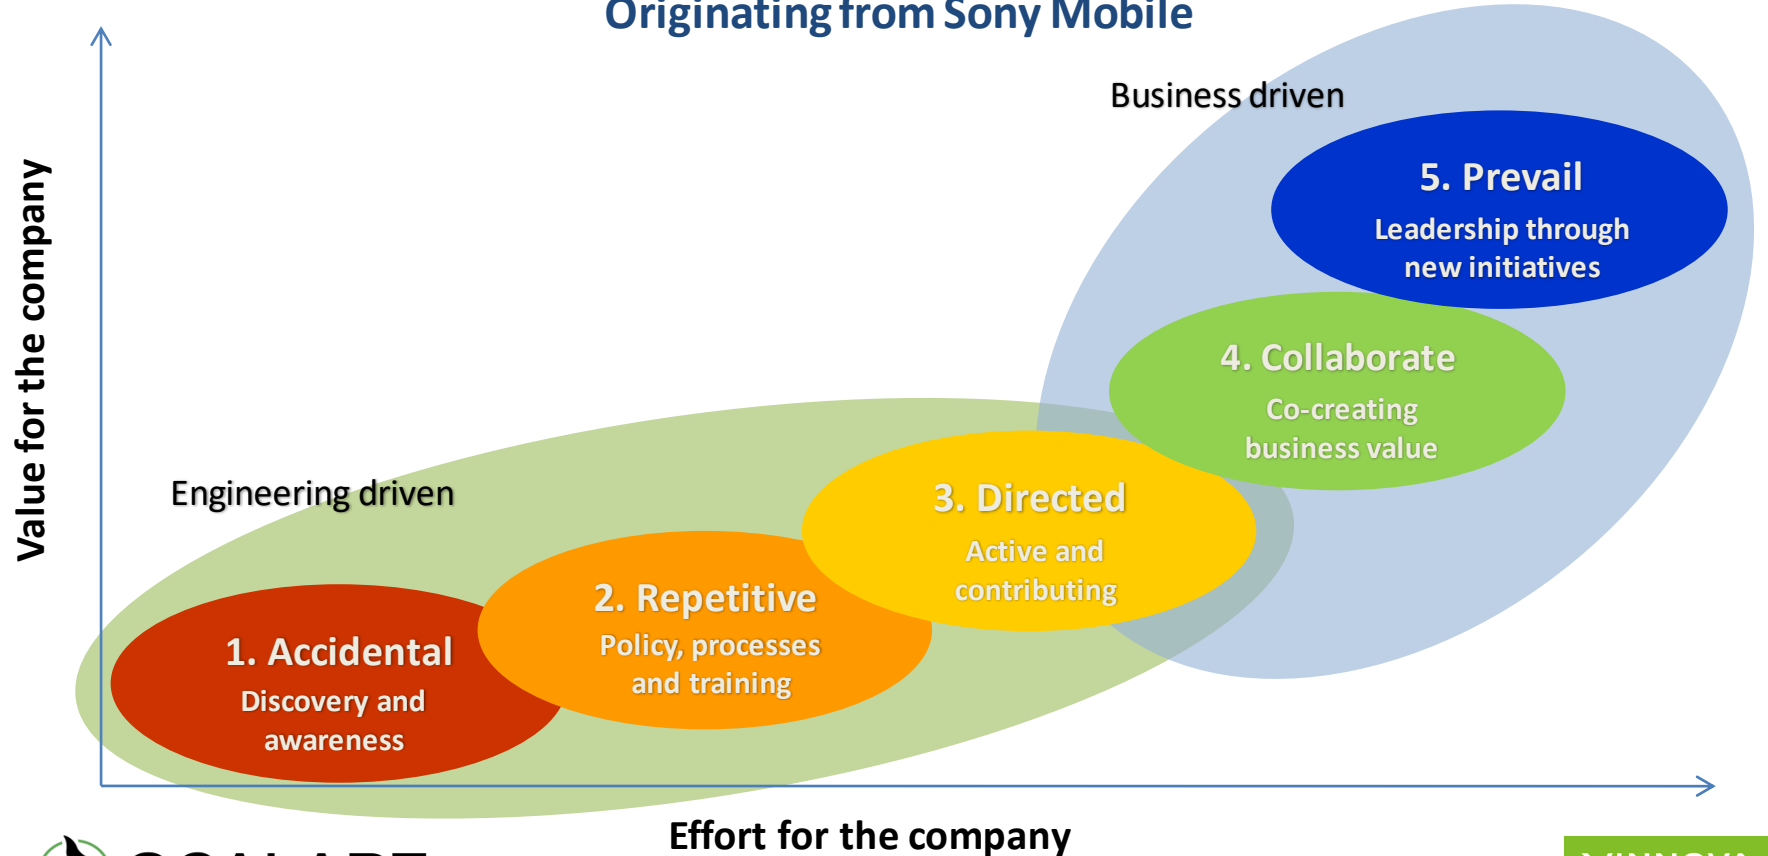

+ Market disruptor & Biz builder

Affecting the core business offering

The Open Source Maturity Model

Originating from Sony Mobile

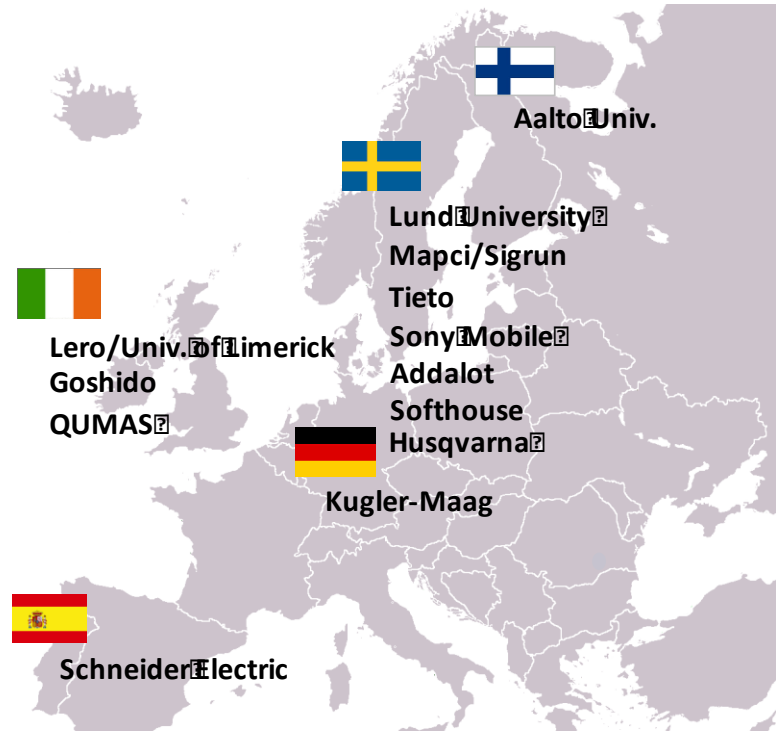

SCALARE

- A 3-year Industrial EU research project by ITEA* (2013-16)
 - *Information Technology for European Advancement
 - Swedish participation was funded by **Vinnova**, the Swedish Governmental Innovation Agency
- Supporting the industry in SCALing softwARE capabilities
- Consisted of 10 companies and 3 universities in 5 countries

SONY

Sony Mobile shared its experience on the introduction of Open Source as the core part of its offerings of smartphones and smartwear.

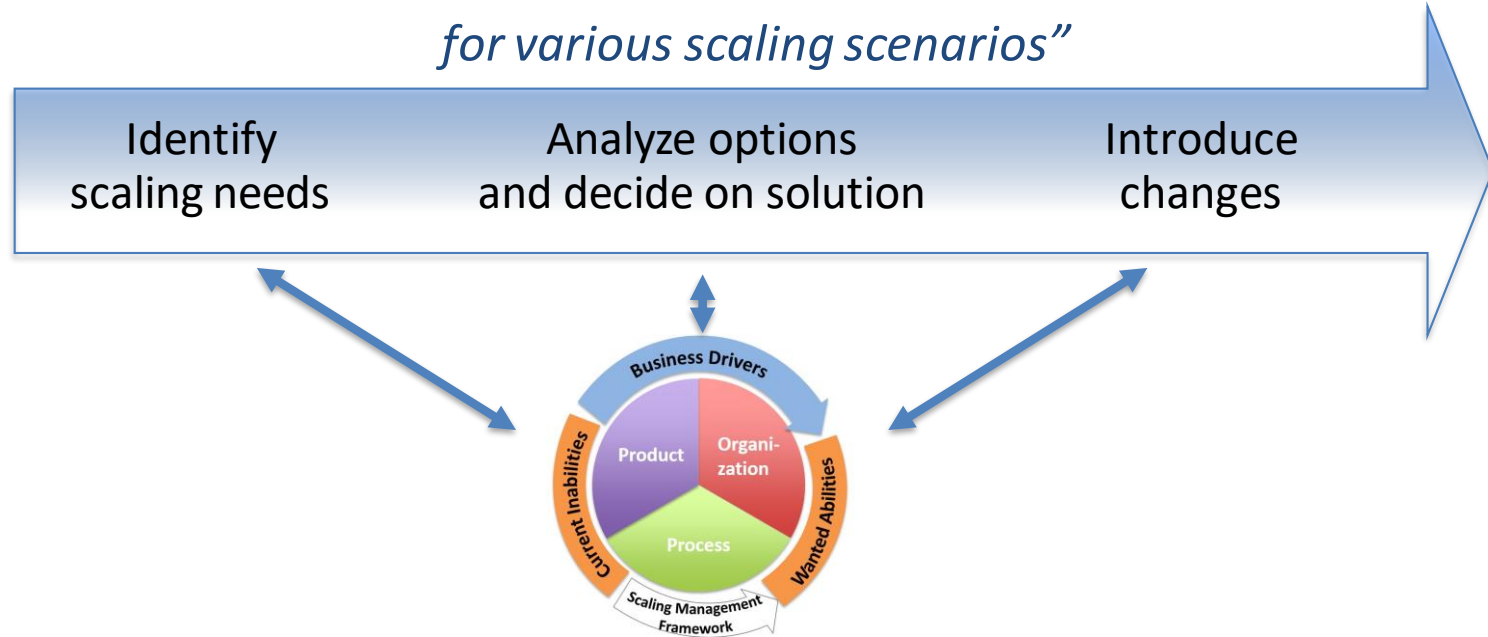

Scaling scenarios

DRIVERS

SCALARE in a nutshell

*“To provide systematic guidance to decision makers,
for various scaling scenarios”*

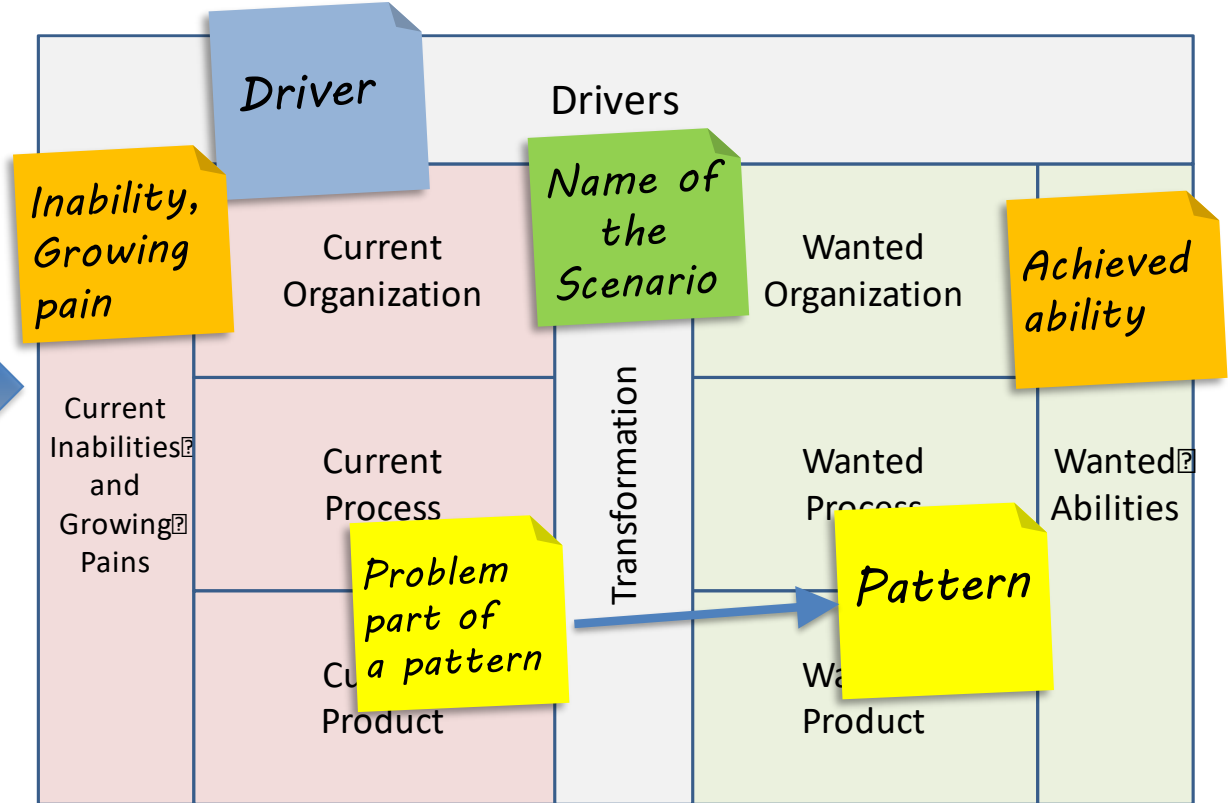

Scaling Management Framework (SMF)

The SMF Canvas

- The SMF Canvas is a 2D graphical representation of the Scaling Management Framework.

- Uses color coded Post-It notes for charting software business Patterns in the three domains

Scenarios

- Basic Software Engineering
- Agile Development
- Servitization
- Deliver 24/7
- **Open Source**
- Outsourcing
- Offshoring

From the Maturity Model to the SMF

Engineering driven

Open Source, Engineering Driven

- Based on the external Maturity assessment made in 2014 at Sony Mobile.
- 14 unique OSS Patterns identified + 4 common.
- Clarified where and what to find value extraction.
- **Key achievement: Product value extracted from Open Source communities.**

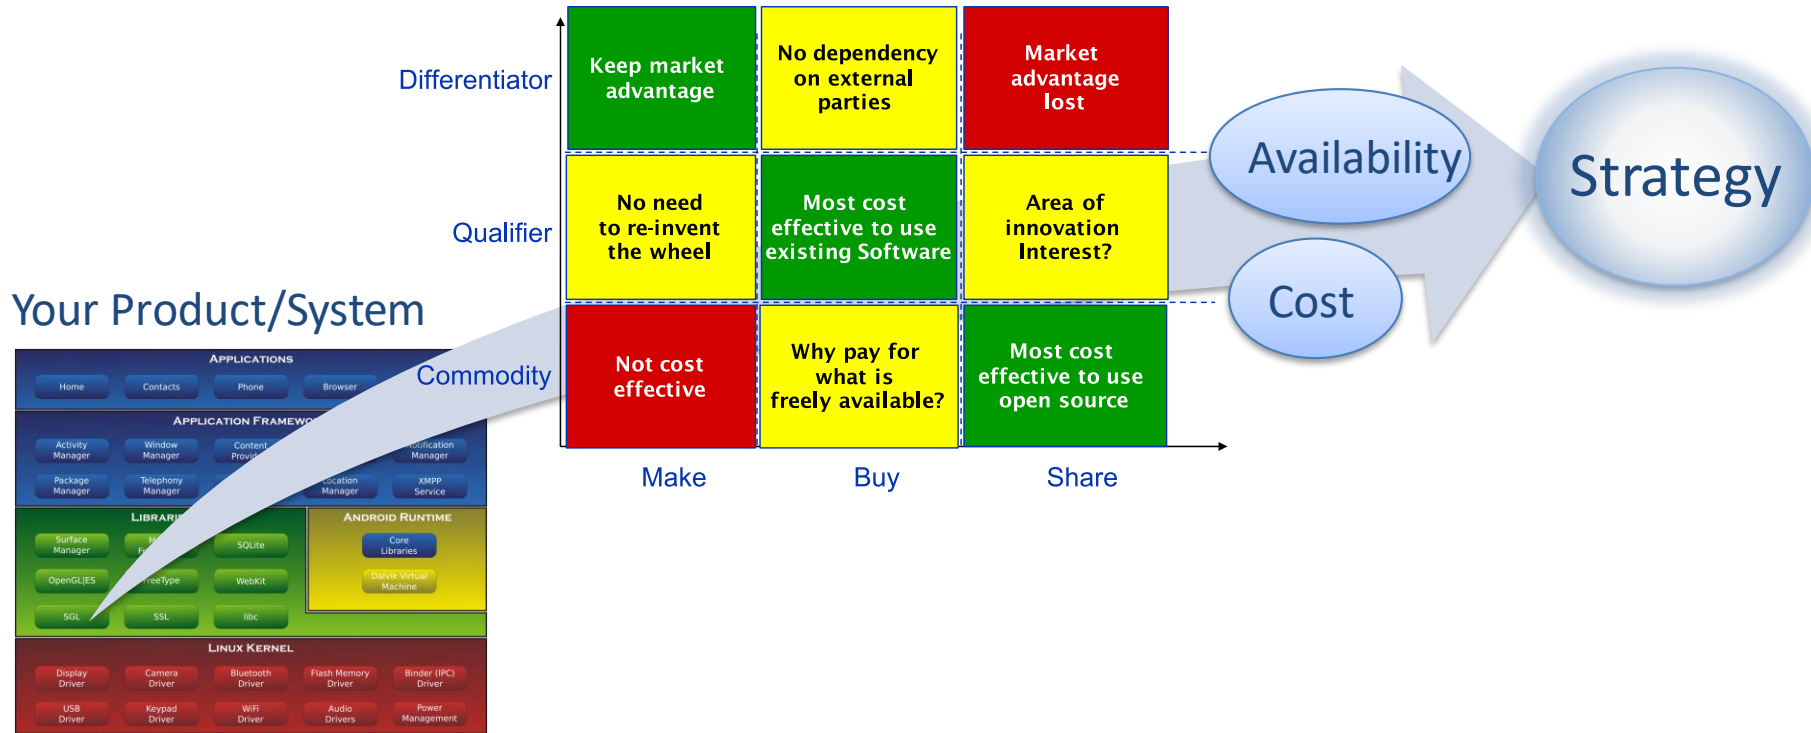

The Pattern “Control Intake”

Process example - a checklist:

- **Why?** – Just happening or a **Conscious** decision?
- **What?** – *Make-Buy-Share* strategy
- **Availability** of Open Source
- **Handling risks**
 - License compliance → possible rework
 - Intelligent Property Rights (patents)
 - Security threats
 - Maintainability of “dead” code (inactive community)
 - Dependencies and lost control
- **Different sources** – e.g. through suppliers

The Pattern “Make-Buy-Share”

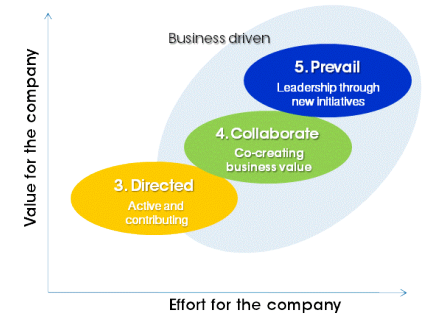

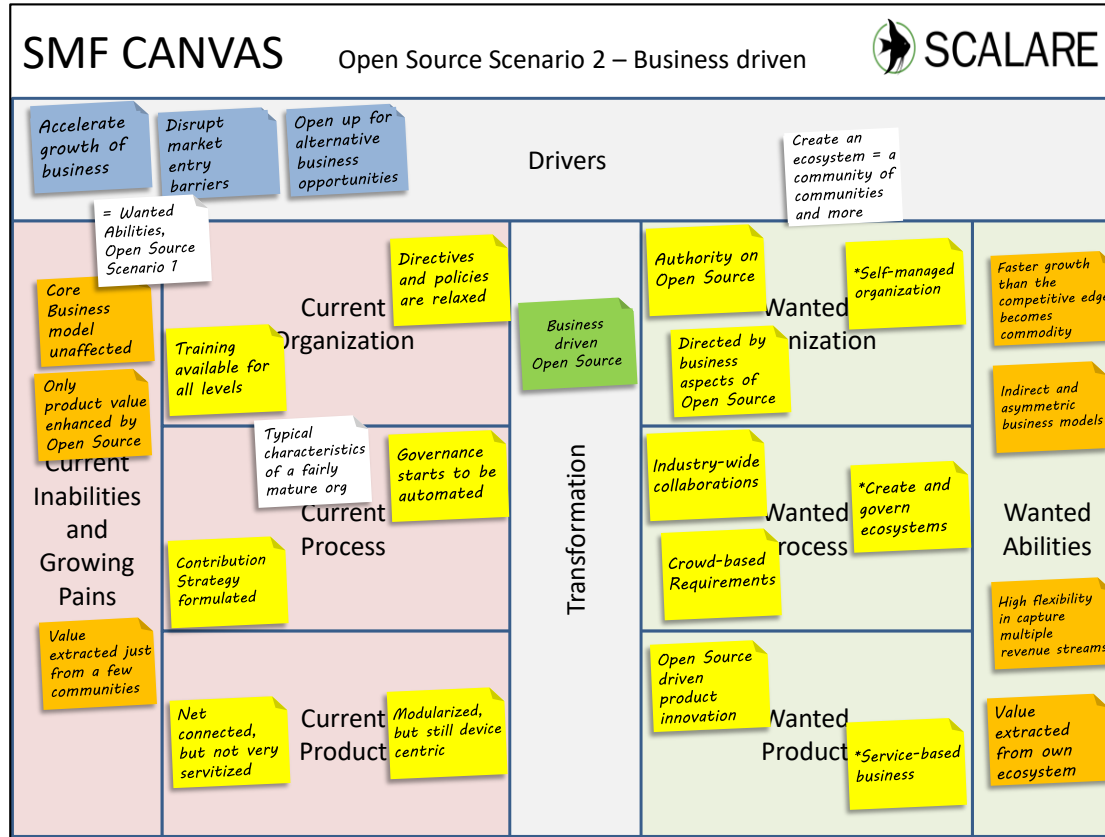

The Pattern “Open Source Officer”

- The Open Source Officer role is for **bridging the gaps** between a risk-averse company management, an legally ignorant software development and a reactive legal entity.
- Prime responsibility for the Open Source Officer role is to evolve and **drive a company’s Open Source Maturity** in both engineering as well as in business aspects.
- Tools of the trade involves the development and maintenance of Directives, Policies, Processes, Guidelines, Training – and Open Source Maturity Models.
- Often chairs/coordinates organizational bodies for governing Open Source, e.g. an “Open Source Board”.
- Naturally becomes the contact point for external parties regarding anything related to Open Source.

Open Source, Business Driven

- Based on Sony Mobile's industry observations and business exploration.
- 5 unique OSS Patterns identified + 3 common.
- Close to the "Servitization" Scenario
- Key achievement: Additional/alternative revenues extracted from orchestrating your own ecosystem.

Patterns in Business-driven Open Source

- The end goal is to extract value to your from your **orchestrated ecosystem** to your business
- Common that the seed of an eco-system is a **Developer Program**
 - Created to catch and nurture the **participatory culture** of Open Source, it's initially intended to open up the company for an environment of independent developers to inspire and influence.
- The Developer program is extended to become your own Open Source community
 - The influence goes both ways, paving the way for a **Crowd-based requirement management** and fueling an **Open Source-driven product innovation**.
- The offer becomes a **open software platform**, allowing other business partners to explore
 - The platform becomes as well the carrier of new offerings that you provide with **Extended** (e.g. services), **Indirect** (e.g. through a HW premium) or **Asymmetrical** (unrelated) business models.
- An **ecosystem is established** that might disrupt the market logic in such a profound way that it in practice forces all other market actors but the strongest to participate.
- The Open Source eco-system is now not only a support for the business – **it is the business!**

Industrial Open Source

– an Open Source governance program for Industrials

- The SCALARE book “Scaling a Software Business” was launched by Springer the summer of 2017 and is available as a [free eBook](#) at Vinnova.
- Contains two chapters on the Open Source Scenarios.
- The handbook on an Open Source Program for Industrials, “Principles for Industrial Open Source”, was recently released as a [free eBooklet](#)!
- Contains detailed descriptions on all 27 identified Open Source patterns.

21

The future for Sony Mobile

- Even the most hardware oriented product offerings are facing to be “servitized” by a combination of **AI/ML, Big Data, Cloud** and **IoT**.
- Those technologies are already entirely **entrenched by Open Source**.
- We are charging ahead on “Beyond Smartphone”.

Key Take Away

1

Open Source is more
than Code & Licenses

It is a matter of maturity!

2

It is not hacker
heaven anymore

There are business patterns for introducing
Open Source in a structured way!

3

Industrial Open Source demonstrates a way of how to do it!
