OPEN NETWORKING //
Integrate, Automate, Accelerate

Very complex...

Evolution of the projects managed by the Linux Foundation

ons
EUROPE
OPEN NETWORKING //
Integrate, Automate, Accelerate

(Automatic) Testing is key to

- Validate modules of any size
- Validate End to End solutions
- Prove interoperability between systems
- Ensure sustainability
- Give performance figures and elaborate KPIs
- Ensure backward compatibilities
- Provide trustability evidence

ons
EUROPE
OPEN NETWORKING //
Integrate, Automate, Accelerate

Richness, diversity...

- Lots of testing organizations/committees/cultures
- Lots of frameworks (Robot, python, bash, ...)
- Lots of options to integrate in CI (jenkins, travis, gitlab-ci...)
-

or chaos: as many CI/CD chains as subprojects?

ons

Keep it simple: xtesting

Facilitate the tester life

- ease the development of third-party test cases by offering multiple drivers: Python, Bash, unittest, robot framework and VNF
- manage requirements and offer lightweight Docker images
- handle all interactions with OPNFV CI/CD components (entry points, results, publication, status codes, etc.)

Let the developer only work on the test suites without diving into CI/CD integration

ons
EUROPE
OPEN NETWORKING //
Integrate, Automate, Accelerate

Smoothly integrate all tests together

- simplify test integration in a complete LFN-based CI/CD toolchain (e.g. Jenkins, Testing Containers, Test API and dashboard)
- allow a proper design and verify multiple components in the same CI/CD toolchain (OpenStack, Kubernetes, ONAP, etc.)

Keep Jenkins jobs and certification program simple as well!

try it!

run xtesting container:
\$ sudo docker run opnfv/xtesting

run xtesting via package (python3):
\$ virtualenv xtesting-py3 -p python3
\$. xtesting-py3/bin/activate
\$ pip install xtesting
\$ sudo xtesting-py3/bin/run_tests -t all
\$ deactivate

Coming soon

- deploy the full CI/CD toolchain via docker-compose (Jenkins, Testing Containers, Test API and dashboard)
- offer GNU/Linux packages

All contributions coming from LFN projects are more than welcome!

Upstream first

ons
EUROPE
OPEN NETWORKING //
Integrate, Automate, Accelerate

Do not reinvent the wheel

- Verify OpenStack and Kubernetes deployments via all OPNFV Functest suites (healthcheck, smoke, benchmarking, components, vnf)
- Complete the verification by homemade xtesting containers integrating healthcheck suites and vnf deployments
- Reuse most of OPNFV CI/CD toolchain components (Testing Containers, Test API and dashboard)

Pushing the limits

- Continuously verify OpenStack and Kubernetes deployment
- Run all testcases in parallel once basic tests pass
- Check the possible remaining resources after runs

The current OPNFV gates are fine for checking installers but not for verifying a production environment

Conclusions

ons
EUROPE
OPEN NETWORKING //
Integrate, Automate, Accelerate

Conclusions

We believe xtesting is valuable for the communities:

- a simple, light and unifying framework without changing community cultures/good or bad habits/design patterns
- the test developers focus only on their tests
- a first step for useful post processing and machine learning as CI/CDs of the different communities generate lots of results

Upstream first & Keep it simple!
